Netview Consulting provides business networking and cyber security solutions to mid-market businesses in Canada and the USA. Netview Consulting provides managed network and security services, systems and network integration, wired and wireless networking, support services, voice solutions and cyber security. Netview is based in Mississauga, Ontario, Canada. Please visit Netview at **www.netviewconsulting.ca**. Email sales at sales@netviewconsulting.ca or call **+1-800-924-9711 extension 800**.

> " Turnium is one of the solutions that we provide when customers need to improve the reliability of connections to the internet and to cloud services. Many of these sites are accessible by floatplane only. Turnium greatly improves performance, speed, and reliability of the voice, video, and other hosted or internet-based applications that are critical to delivering on our customer's mission and mandate."

- **Mike Millar,** Principal
  Netview Consulting Inc.

Challenge

Delivering cloud-based applications, video conferencing, and IP-based telephony to a 30-site community service organization spread across Northern Ontario is highly challenging. Difficult, wild terrain, lack of roads, and large distances meant that many sites relied on challenging wireless links or were limited to dial-up services with 100 kilobit per second speeds.

Solution

Netview Consulting Inc. used Turnium to combine multiple wireline, wireless, or Starlink connections at each of the organization's 30 sites to deliver a reliable internet and cloud application experience.

Turnium enabled Netview to increase bandwidth to increase the performance of internet and voice/video services by aggregating any available wireline, wireless, or Starlink circuits at each site. Failover across the bonded circuits prevents sites from being totally disconnected. Deploying QoS improved voice and video quality and Netview's solution enabled the organization to use cloud voice, video, and internet applications to increase inter-site communications and coordination. Turnium's platform automates network programming and provides Netview with visibility and control over network performance to help increase customer experience.

About Turnium

Turnium Technology Group, Inc. delivers its software-defined wide area networking (SD-WAN) solution as a white label, containerized, disaggregated software platform that channel partners host, manage, brand, and price and as a managed cloud-native service. Turnium SD-WAN is available through a channel partner program designed for Telecommunications Service Providers, Internet and Managed Service Providers, System Integrators, and Value-Added Resellers.

About SD-WAN

SD-WAN is revolutionizing the networking and telecommunications industry by abstracting secure, high-speed networking and network control from underlying physical circuits. SD-WAN frees enterprises, small-medium businesses, cloud, and managed services providers from the business and cost constraints imposed by traditional telecommunications companies.
